

## Roof and Wall Panel Systems

### Features and Benefits:

- Attractive, versatile, maintenance-free roofing and wall cladding options that are 100% recyclable and able to last a lifetime
- The potential for significant cost-savings over time in comparison to other roof systems due to improved durability and lower material, installation and insurance costs
- Lightning-resistant; no warping, cracking, or peeling
- Non-porous Galvalume steel prevents unnecessary weight on the roof caused by water absorption
- Custom made-to-order fabrication allows for continuous long-length panels from ridge to eave
- A variety of colours and finishes enables beautiful and affordable design alternatives for any application

### Standing Seam Roofing Systems

- 26ga, 24ga, or 22ga roll-formed panel systems offer a sleek, durable solution to tough Canadian winters
- The interlocking seam and concealed fastener system is engineered to prevent leaking and damage caused by ice-damming, a common issue with other roofing systems

- Three panel types use different installation techniques to ensure that the best and most economical panel is available
- Available in a wide variety of colours and finishes
- Produced to 12" or 20" coverage and custom lengths – coil stock is rolled out and slit in-house to produce custom panel widths and colours when required

### Exposed Fastener Roofing and Wall Systems

- Light-gauge roll-formed panel systems are durable and affordable
- Easy to install screw-through panels can be used for both roof and wall cladding
- Most panel designs offer 36" coverage and are run to custom lengths

### Concealed Fastener Wall Systems

- 26ga, 24ga, or 22ga roll-formed flush panel systems offer clean, sophisticated options for commercial, architectural and industrial applications
- An interlocking design with concealed fasteners allows for fast and economical installation
- Available in a wide variety of colours, finishes and matching trim

Flawless from Fabrication to Finish
